

Presents the

"TES - World's Fastest Drying System"™

At this course you will learn:

- A systematic approach to the fastest drying method.
- Drying with heat while maintaining low ambient temperatures.
- How we get rid of the moisture with the Reets Evaporation Method.
- To calculate evaporation potential and qualify your equipment decisions.
- What numbers you need to know and how to use them to dry.

This course is taught by Jeremy Reets, the innovator of ultra high-speed drying, the evaporation formula and the Reets Evaporation Method. He designed the process and equipment that makes drying in as little as one day...with heat... at low ambient temperatures. Profitably!

Of course it's hands on! It's also taught at the best flood house in the country, designed to provide real life examples of the tough stuff we see in the field. The High Speed Drying System is a true "system" with step by step procedures that you will see, hear, do and teach and then take it back and start using them in your business.

You're probably thinking "I've been to several classes already. I don't need to go to another one." One of the greatest things about this industry that you have chosen is that it is changing quickly; it isn't boring. That means that in order to stay current with progress you have to make changes to keep up. Who's going to change first, You or Your Competition? Are You driving your market, or is Your Competitor? This is a profitable industry for those at the top of the Pyramid of Progression. Meet me there!

Jeremy,

I just wanted to thank you for putting on a great class. That was, by far, the best training that Brian and I have been to. We are excited to put the TES System to work, and will keep you posted on how it is going for us. Let us know if you plan on making a trip up here to Maine. Again, it was a pleasure to meet you, and thank you for the very informative training.

-Shawn M. Cox
